

My name is Attila Tombacz M.D.
I was born in 1963, Szeged, Hungary.

I graduated in my city's schools and was admitted to the SZTE (Szent-Györgyi Albert University of Szeged) in 1982 to the Medical Faculty.
I've got my diploma in 1988 with Cum Laude.

My medical career started at the Clinic of Traumatology in 1988 of the same university.
In 1989 I went to the Clinic of Pediatrics and spent there for 5 years.
The majority of my time was spent at the Hemato-Oncology ward of the clinic.

In 1993 I joined to an English pharmaceutical company, Wellcome as a product manager.
In 1996, when „Wellcome” and „Glaxo” merged, I moved to a French pharmaceutical company Synthelabo Medica.
In 1997 I was invited by a US pharmaceutical company, Abbott. I was working as a product manager and in the last years, I became a district manager at the Diagnostic Division.

In 2006 I started my career as a private entrepreneur. I was a medical consultant for US, German and Hungarian companies that distribute vitamins and other food supplements.

Between 2011 and 2013 I was the medical and marketing director of a Hungarian human tissue bank, Genimplant.

In the last 10 years, I consciously looked for those alternative methods, which can improve the health of people with the less side effects.

In March of 2017, I met dr. Robert Lyons and heard about the Kaqun technology. I was convinced at the very first sight, and I started to learn as much as I can about it. I personally experienced many successful cases. Moreover I can measure the changes by instruments, which is very important for me. Here I am working as a medical consultant.
